CONSTRUCTION PROCESS

1. Selection of ceramic tile: Check whether the number and quantity of the product are correct in accordance with the requirements of the design, and whether the working dimension and color code are uniform. Take the same products from different packages to carry out the inspection and trial pavement. In case of any doubt, please contact our company without hesitation, and your will get the immediate response.
2. Cleaning of foundation layer: The foundation layer shall be clean and sanitary. The foundation layer with dirt, coating and other attachments shall be cleaned off.
3. Immersion of tiles: The immersion is not required.
4. Leveling of foundation: Prior to the pavement of the product, the foundation layer shall be leveled. The pavement on the uneven foundation layer will result in the irregular joints and non-straight face.
5. Pavement with joint: Upon the pavement with joint, the measures shall be taken to prevent the bulge and spalling as a result of the thermal expansion.
6. Direction of pavement: The product characterized by the texture shall be paved in the direction of the texture.
7. Joint filling: 24 hours after the pavement, the joint mixture in the proper color shall be used to fill the joint between the ceramic tiles, and fill with and press the joint mixture along the direction of the diagonal, in order to point the smooth and even joints; after the natural drying for 2-4 hours, the rag is used to clean up the surface of the ceramic tiles.
8. Curing: 24 hours after the pavement, the water shall be sprayed on the ceramic tiles for curing; No walking on the ceramic tiles until it is 48 hours after the pavement of the products.

CURING OF ANTIQUE TILES:

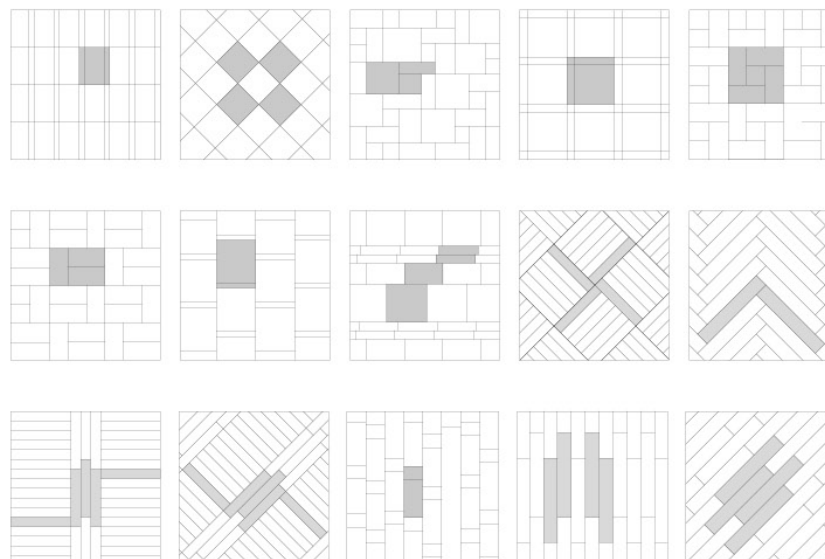

1. After the pavement and before the use, in order to prevent the damage to the face of the tile due to the construction of the other projects, the antique tiles shall be protected with the woven bags and other non-discolored articles, and the face of the tile shall be covered properly.
2. If the nailing air compressor shall be used on the faces of the tiles which have been paved, the air compressor shall be padded properly with the wooden block. The direct contact of the wheels of the air compressor with the face of the tile is prohibited so as to prevent the influence of the vibration of the air compressor on the face of the tile. The rusty water discharged from the air compressor shall not flow on the face of the tile to prevent the seepage of the rusty water into the tile adobe.
3. After the construction, the vacuum collector shall be used to clean the floor in order to remove the fluid and then the clean cloth shall be used for wipe-off.
4. The household detergent shall be used for the routine cleaning.
5. The mixture of soap and small amount of ammonia solution or the mixture of the flaxseed oil and turpentine oil in the equal amount shall be used to wipe the ceramic tiles more lustrous due to the higher decontamination.
6. If the strong tea or ink and other solutions with the high dyeing property are splashed on the face of the tile, it is required to clean off immediately.
7. Due to the ultra-high staining resistance, the antique tiles shall be cleaned with water and standard neutral detergent.
8. If the stubborn stains are attached carelessly, please select the appropriate detergent for cleaning.

CURING OF POLISHED TILES:

1. After the pavement and before the use, in order to prevent the damage to the face of the tile due to the construction of the other projects, the antique tiles shall be protected with the woven bags and other non-discolored articles, and the face of the tile shall be covered properly.
2. If the nailing air compressor shall be used on the faces of the tiles which have been paved, the air compressor shall be padded properly with the wooden block. The direct contact of the wheels of the air compressor with the face of the tile is prohibited so as to prevent the influence of the vibration of the air compressor on the face of the tile. The rusty water discharged from the air compressor shall not flow on the face of the tile to prevent the seepage of the rusty water into the tile adobe.
3. With regard to mopping for the routine cleaning, the dry mopping shall be used as much as possible instead of the wet mopping. In case of the local dirt or stain, the household detergent such as cleaner essence and washing powder and/or stain remover shall be used for cleaning. Furthermore, the floor wax shall be applied to the floor on a regular or irregular base, and then wiped bright after drying, so as to maintain the face of the tile as bright as possible. In case of the better economic conditions, please make use of the crystal face treatment in order to achieve the same effect as the high-grade hotel.
4. Cleaning method for general pollution sources:
 - (1) Animal and vegetable fats, beers, coffees, ice creams: Wipe directly with or wipe after immersed with diluted hydrochloric acid, diluted oxalic acid or detergent.
 - (2) Sediments, inks, rusts, pulps, strong teas: Wipe after immersed with diluted hydrochloric acid, oxalic acid, sulfuric acid, or detergent.
 - (3) Paints, mapping pen solution, rubber: Wipe directly with or wipe after immersed with turpentine, trichloro ethylene, pyruvic acid, or alkali and diluted nitric acid.
 - (4) Slurry: Wipe directly with or wipe after immersed with flaxseed oil.
 - (5) Routine cleaning: Wipe directly with or wipe after immersed with household detergent or washing agent.
